DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/03/2008 has been entered.

2. The amendment filed 12/03/2008 has been received and considered. Claims 1-7, 9-12, 14-19, and 32 are presented for examination.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. Authorization for this examiner's amendment was given in a telephone interview with Carl K. Turk (Registration # 59,675 at ADORNO & YOSS, LLC) on 10th February, 2009 at 4:00 p.m.

4. The application has been amended as follow:
Cancel claims 20-30 and 34.

Allowable Subject Matter

5. Claim 1-7, 9-12, 14-19, and 32 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter:

While Shen et al. teaches a modeling system node for use in assembling a plurality of structural elements comprising a node element, a body, at least one connection port disposed relative to the body, of being and configured to be coupled to an adjacent structural element a computational unit configured to receive information of physical characteristics of the node element from the connection port; the computational unit including unique characteristics of the node element, input data from a communications device, output data from a transmission device, and a bond element comprising a body, a first and a second connection port disposed relative to the body, at least one of the first and the second connection ports capable of being coupled to the node element; and a computational unit disposed within the body, wherein the computational unit receives information of physical characteristics of the bond element from at least one of the first and second connection ports, and Eisenberg et al. teaches a molecular modeling system and a communications device capable of providing data from the computational unit to an external computer system, nor the prior art of record discloses a molecular modeling system and structural modeling kit, including:

(Claim 1) “a computational unit disposed within the body... the computational unit including:

a memory device for storing embedded rules of the body and operational instructions associated with functioning of the node element, the instructions including:

Art Unit: 2123

unique characteristics of the node element, ...

communication rules for determining a state of the body, rules for building

the body, and computational functions for processing of the instructions and

interpreting the communication rules and the rules for building.”,

(Claim 17) “a computational unit disposed within the body... the computational unit including:

...

a memory device for storing embedded rules of the body and operational

instructions associated with functioning of the node element, the instructions including:

unique characteristics of the node element, ...

communication rules for determining a state of the body, rules for building the

body, and

computational functions for processing of the instructions and interpreting the

communication rules and the rules for building.”, and

(Claim 32) “a computational unit disposed within the body... the computational unit including:

...

a memory device for storing embedded rules of the body and operational

instructions associated with functioning of the node element, the instructions including:

unique characteristics of the node element, ...

communication rules for determining a state of the body, rules for building the

body, and

Art Unit: 2123

computational functions for processing of the instructions and interpreting the communication rules and the rules for building.”.

in combination with the remaining elements and features of the claimed invention.

It is for these reasons that the applicant's invention defines over the prior art of record.
